[Tzuyi Lee](#) [Jasper "Dutch" Steutel](#) ~~[Lara Ortiz Luis](#)~~

Attachments [📎 Weekly Product/Design Sync](#)

Summary

Meeting discussions summarized successful content engagement, weight management research insights, and current quarterly performance goals.

Content and Nutrition Success

Record attendance of 934 members for nutrition sessions demonstrates strong interest. Teams are addressing capacity constraints and managing feedback via chat.

Weight Management Research Insights

User interviews revealed a strong preference for professional guidance over tracking applications. GLP-1 form factors significantly influence overall product perception.

Quarterly Goals and Performance

Enrollment trends remain steady while Warm member targets lag. The team decided to leverage existing nutrition content to drive engagement for specific goals.

Rate this Summary: [Helpful](#) or [Not Helpful](#)

Next steps

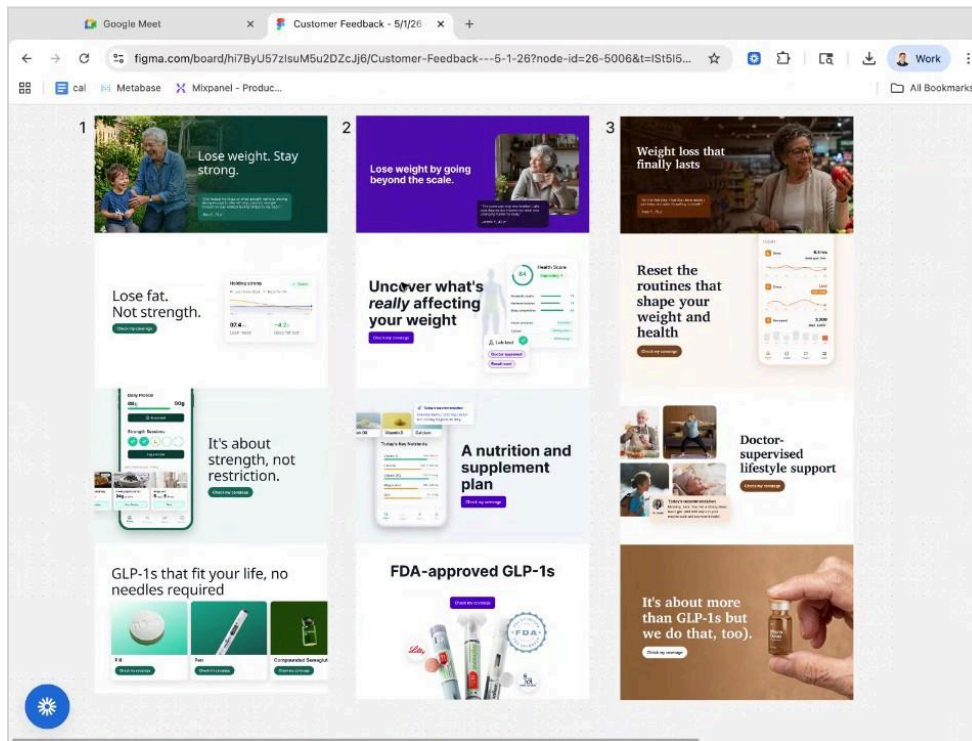

- ☐ [Alicia Rios] Answer Questions: Collaborate with Janice answering 3 to 5 unanswered member questions. Distribute answers through member communication or blog posts.
- ☐ [Alicia Rios] Transfer Survey Data: Obtain necessary help to transfer collected survey data into Metabase.
- ☐ [Alicia Rios] Share Survey Details: Provide Chris with detailed member feedback and data gathered from recent session surveys.
- ☐ [Jasper "Dutch" Steutel] Discuss Priorities: Catch up with Chris about current project priorities. Focus discussion on R and Anu involvement and marketing lead time.
- ☐ [Jasper "Dutch" Steutel] Prepare Skill Session: Prepare a light primer and example skills demonstration for next weeks session.
- ☐ [Alicia Rios] Boost Warm Engagement: Develop strategies using recorded session content to improve warm goal engagement metrics.

Details

Did the screenshots in this section make your notes [better](#) or [worse](#)?

- **Weekend Activities and Location:** Jasper "Dutch" Steutel and Alicia Rios briefly shared about their weekends, with Alicia Rios mentioning a STEM fair and community events in Elk Grove, just south of Sacramento. Alicia Rios noted that the area is appealing due to its proximity to beaches and snow, good housing, great schools, and community amenities.
- **Nutrition Session Attendance and Success:** Alicia Rios confirmed the success of the second nutrition session, which had 934 attendees, marking a new record for show-up rates. They mentioned that over 2,000 members had registered for the session, which was promoted via two email blasts. Chris Lloyd noted that these high attendance numbers would translate into billables, which is exciting.
- **Weight Management Prototype Interview Insights:** Chris Lloyd provided a readout on the early prototype interviews for the weight management program,

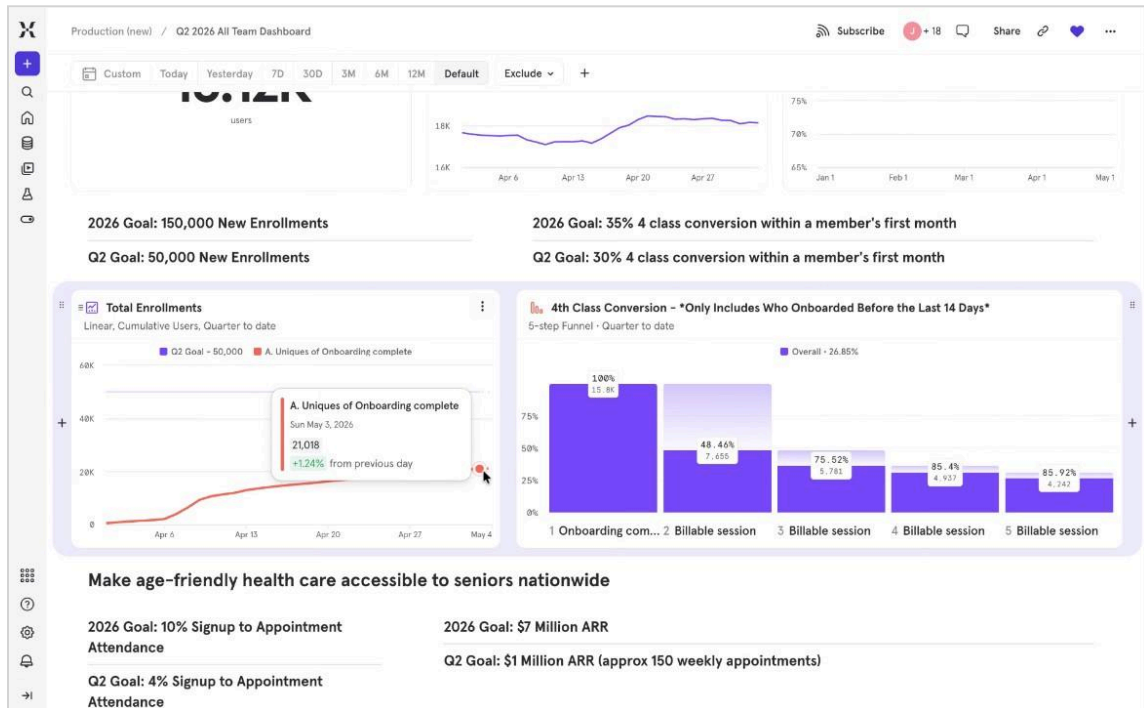

noting that three out of five intended interviews were completed. The team tested three distinct prototypes focused on protein/strength, lab results/micronutrients, and lifestyle/habit formation, with varying GLP-1 value propositions centered on performance, safety, and tapering. A key finding was that the GLP-1 form factor, such as avoiding needles or preferring recognized brands, could override interest in the overall product, emphasizing its salient importance.

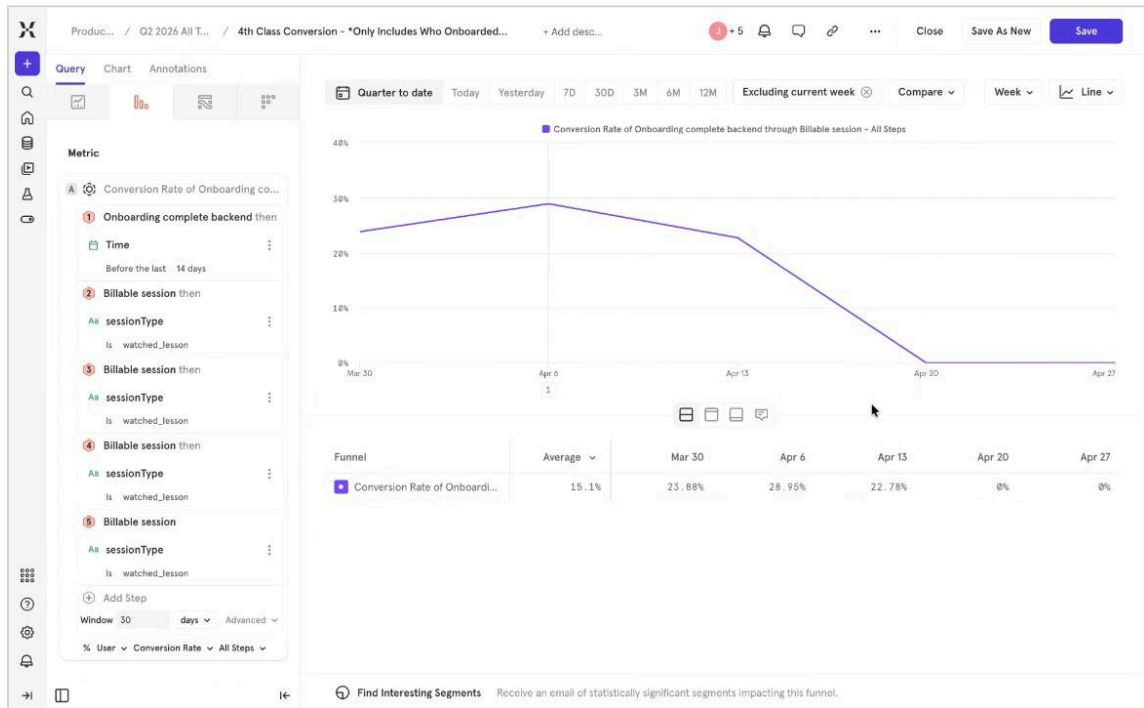

- **User Preferences for Convenience and Guidance:** Chris Lloyd and Tzuyi Lee highlighted key user preferences gathered from the interviews, including older adults being driven by convenience and preferring meal plans or clear shopping lists over logging their own food. Furthermore, Tzuyi Lee noted a strong distaste for the third prototype focused on logging lifestyle pillars like sleep, food, and exercise, as users found it too basic and labor-intensive. Users consistently expressed a desire for clear, professional guidance on what to eat and do rather than applications that only help them track what they have already done.
- **Future Research Considerations for GLP-1s:** Chris Lloyd recognized that the GLP-1 value props were so compelling that they warranted separate, potentially large-scale research, such as a survey, to better understand people's fears and concerns regarding GLP-1s. Chris Lloyd also suggested revisiting the screener to

better segment older adults based on their past experiences with GLP-1s to identify the product's "sweet spot" within that cohort. Izabela Bulska agreed that large-scale surveys and secondary research would be beneficial for diving deeper into the GLP-1 topic.

- **Lifestyle and Well-being Live Content Results:** Alicia Rios shared the success of the new "Lifestyle and Well-being" live content, which is focused on non-fitness offerings like weight management and nutrition, and is designed to improve member retention and habits. The recent session attracted 934 members, breaking the previous attendance record, and the format is gaining momentum. The current challenge is that the sessions are offered as Zoom meetings, which cap attendance at 1,000, and the team is preparing the MEX team to respond with apologies and recordings if capacity is exceeded.
- **Feedback and Future Content Strategy for Live Sessions:** Members provided key feedback requesting handouts, recordings, and ways to get unanswered questions addressed. Alicia Rios is planning to address three to five questions through collaborations with Janice or by creating member blogs, and they are working on fast recording turnaround times for distribution. It was also learned that the broad weekly topics, such as eating for functional health, could be expanded into numerous specific topics focusing on eating for chronic conditions, older adults, and macro guidance.
- **Operational Feedback and Q&A Management:** Alicia Rios noted that they have been facilitating the sessions and receiving numerous questions, including requests for appointments with clinicians like Janice and questions about having other professionals respond live. All questions are currently coming in through the chat box, as participants are forcibly muted, and Sarah V and Eliza are assisting with pulling out feedback and capturing questions. Monica Torres suggested investigating tools, like the one available in Zoom Webinar, that allow for pre-posting and upvoting questions.
- **Quarterly Goal Review: Warm and Enrollment:** Chris Lloyd shared the Q2 goals, noting that the goal for "Warm" (22,000 members) is currently off track and plateaued around 18,000. Chris Lloyd suggested leveraging the nutrition content, possibly by engaging incoming Kaiser members, to boost the Warm numbers, and they tasked Alicia Rios with finding ways to use the recorded class content for engagement. Enrollment is on track to hit the 50,000 target, currently at 21,000 members.

- Quarterly Goal Review: Activation and Clinic Appointments:** Activation is at 26% quarter-to-date, showing slight improvement, with a potential target of consistently reaching 30% by the end of the quarter. Steady gains are being made in clinic physician appointments per week, though new improvements shipped to allow "provider first" bookings have not yet yielded the expected conversion rate, requiring further experiments. The next primary focus will be shipping the weight management program to increase top-of-funnel demand, with the aim of developing a GLP-1 companion or prescription product by Q3.

- Skills Session Planning:** Jasper "Dutch" Steutel proposed hosting a "Skills" session next week to gauge people's familiarity with the subject and to showcase examples. Because some participants, including Monica Torres and Chris Lloyd, are not currently using or scheduling skills, the session will include a light primer followed by examples. Jasper "Dutch" Steutel also noted the need to discuss priorities and lead times for marketing and launch, as other tracks are occupying R and Anu's time.
